

Desert Living Center

Las Vegas Springs Preserve, NV

An immersive model in sustainable desert living

The Desert Living Center is the centerpiece of the Las Vegas Springs Preserve (LVSP). Its goal is to offer Las Vegas residents, students and design professionals the strategies and tools to live sustainably in the Mojave Desert, while inspiring visitors to adopt environmentally-friendly lifestyle changes.

Working closely with the project architects, AldrichPears developed fun, hands-on interactive experiences throughout the massive five-building campus and its gardens that interpret sustainable practices, such as composting, water conservation, alternative energy, waste management and LEED building. Visitors are invited to participate in workshops in the technical training studios and discuss relevant community issues at the Dialog Center.

APA developed LVSP's entire interpretive program from start to finish, from masterplan to exhibit design through to management of exhibit fabrication and installation.
