

Guangdong Science Center

Guangzhou, China

Scientific mysteries and inventions for everyone

When it opened, the award -winning Guangdong Science Center was the largest science center in China.

Our firm created concepts for five inaugural exhibition galleries. The Science Detective gallery challenges visitors to solve mysteries related to crime, archeology and nature. The Dream of Spaceflight gallery inspires the next generation to engage in space exploration. The Eye Wide Opener gallery encourages visitors to explore phenomena they cannot see with an unaided eye. The Invention and Design gallery lets visitors tinker, play and use their imaginations in an inventor's workshop where they can make their own inventions at experiment stations. The Children's gallery contains recreated world ecosystems. In this gallery, children embark on voyages of discovery from the highest mountains and dense rainforests to vast open grasslands.
