

# Guangdong Science Center

Guangzhou, China

## Science for Everyone

When it opened, the Guangdong Science Center was the largest of its kind in China. With almost half a million square feet of exhibits, the award-winning Center connects visitors to science—across time and in unique ways.

APA developed five of its galleries. The Science Detective gallery challenges visitors to solve mysteries using forensic science. The Spaceflight gallery inspires the next generation to engage in space exploration. The Eyes Wide Open gallery reveals phenomena visitors cannot see with the naked eye. The Invention gallery lets visitors tinker, play and use their imaginations in a workshop where they can make their own inventions. In the Children's gallery, kids embark on voyages of discovery from the highest mountains and dense rainforests to vast open grasslands.
