

Desert Living Center

Las Vegas Springs Preserve, NV

Sustainable Desert Living

The Desert Living Center is the centerpiece of the Las Vegas Springs Preserve (LVSP), offering Las Vegas the strategies and tools they need to live sustainably in the Mojave Desert, while inspiring visitors to adopt environmentally friendly lifestyle changes.

Working closely with the project architects, APA developed fun, hands-on interactive experiences throughout the expansive five-building campus and its gardens. Visitors explore environmentally sustainable practices, such as composting, water conservation, alternative energy, waste management and LEED buildings. Visitors are invited to participate in workshops in the technical training studios and discuss relevant community issues at the Dialogue Center.
