

# Exploration Gallery at the Vancouver Aquarium

Vancouver, BC

## Hidden worlds revealed through technology

The Vancouver Aquarium wanted visitors to see aquatic life with fresh eyes and encourage new ways of thinking about the aquatic world.

APA worked with aquarium staff to provide experiences that let visitors engage with live marine animals in ways that are safe for the animals and visitors. New experiences use a range of technologies to bring the invisible behaviors of marine life into plain view. Easy-to-use media interfaces allow visitors to manipulate space, time and scale. Updateable interpretation provides a platform for continual change, exploration and discovery. APA designed the gallery programming areas help staff-visitor interactions based on open-ended learning opportunities.

APA developed the concept and detailed exhibit design and supervised the fabrication of exhibits.
