

Valley of Fire State Park Visitors Center

Overton, NV

Extraordinary, Extreme Environment

Set within a landscape of dramatic red rocks and towering sandstone boulders, Valley of Fire State Park appears otherworldly. This irresistible draw has overwhelmed the visitor center and exhibits with wear and tear from a steady increase in visitors. A refreshed visitor center will help Valley of Fire grow into the future.

APA is working with Nevada State Parks and an accompanying architecture firm to design new, durable, and engaging exhibits in the visitors center. The design concept inspires interactive experiences inside an immersive space, highlighting the incredible natural beauty of the park, while also reminding visitors of the fragility of the unique desert environment. Visitors will see projected animations of the major climatic and geologic events, touch real fossils from ancient creatures, and discover how well-adapted the desert animals are to their environment.
