

# Flight Gallery at Discovery Centre

Halifax, NS

## Experience Innovation

The Discovery Centre acts as a catalyst of change in the Maritimes by engaging visitors with science, technology, engineering, art and math. APA worked with the Discovery Centre to develop a gallery focused on aviation in Nova Scotia.

The Flight Gallery is a dynamic, hands-on environment that uses the lens of aviation to explore core principles of invention and innovation, encouraging visitors to engage in a scientific cycle of “Design It, Make It, Test It, Refine It”. By role-playing and exploring the jobs of mechanics, air traffic controllers, and engineers, visitors gain insight into real-world career paths and the contributions of local science to global aviation. They can also climb into a Piper Cub aircraft, and even fly over the province using a flight simulator.
